A study to assess the knowledge regarding post operative care among primigravida mothers undergoing caesarean section
*Poongodi .V

Abstract

Objectives: To assess the level of knowledge regarding post operative care among primigravida mothers undergoing caesarean section. Methods: Descriptive research design was used for the study. Result: showed that out of 30 samples 13 (43.3%) mothers had inadequate knowledge, 11 (36.6%) mothers had moderately adequate knowledge and 06 (20%) mothers had adequate knowledge. Conclusion: the Primi gravida post natal mothers need education regarding the post operative care after caesarean section.

Key Words: Primi gravida, cesarian section, post operative

Introduction

The caesarean section rate rise steadily from 16.6 to . 27.4 per 100 hospital deliveries, resulting in 65% increase over 12 years. Maternal deaths and complications from caesarean sections was high. Increased involvement of specialists in the care and improved intra and post operative management of cases was advocated to reduce the higher maternal mortality rate. Limited maternity stay imposes a great challenge for the nurse about the post operative care after caesarean section. Thus the investigator feels that there is a great need to provide the information on the post operative care after caesarean section to the primi gravida women.

Statement of the problem

A study to assess the knowledge regarding post operative care among primi gravida mothers undergoing caesarean section in selected hospital.

Objectives

- To assess the level of knowledge regarding post operative care among primi gravidae mothers undergoing caesarean section.
- To associate the level of knowledge with selected demographic variables.

Research Methodology

Research approach

Quantitative research was used to assess the knowledge regarding postoperative care after caesarean section.

Research design

Descriptive research design was chosen for the study to assess the knowledge regarding post operative care after caesarean section.

Sample size

30 Primi gravida post natal mothers underwent caesarean section
Sampling technique
Non probability convenient sampling technique.

Criteria for sample selection

Inclusion criteria
- Primi gravida post natal mothers underwent caesarean section.
- Mothers available during data collection period.
- Mothers who were understand Tamil or English.

Exclusion criteria
- Primi gravida postnatal mothers underwent normal vaginal delivery.
- Women underwent other abdominal surgeries.

Data Analysis

Table: 1 frequency and percentage distribution of knowledge among the Primi gravida post natal mothers underwent caesarean section regarding the post operative care after caesarean section.

Major findings
With regard to age of mother 18(60%) were in the age group of 23-27 years, majority of mothers had second education, among 30 mothers 24(80%) were house wives '24(80%) were have monthly income of Rs ≤3000, 24(80%) mothers from nuclear family, 20(66.70%) belongs to Hindu religion, 22(73.3%) mothers living in urban areas, majority:~ the mothers12( 40%) were getting health information through health personnel.

With regards to the mothers knowledge regarding the post operative care after caesarean section, out of 30 samples 13( 43.4%) mothers had inadequate knowledge, 11(36.6%) mothers had moderately adequate knowledge, 06(20.0%) mothers had adequate knowledge The association of the level of knowledge among the Primi gravida post natal mothers underwent caesarean section regarding the post operative care after caesarean section with selected demographic variables revealed that the age, education, occupation, family income, type of family, religion area of residence were significant at the level of P<0.05.

Limitations
- The sample selection was limited to 30 samples.
- The data collection period of the study was one week.

Conclusion
The study concluded that majority of the mothers had inadequate knowledge and moderately adequate knowledge. This shows that knowledge regarding the post operative care after caesarean section was inadequate. There is a need to improve the knowledge regarding the post operative care after caesarean section.
